Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (AUG-1999) to the BMBL/GenBank/DDBJ databases.
-!-FUNCTION: Receptor for extracellular adenine nucleotides such as ATP and ADP. In pancreatic islets, may mediate some of the effects of extracellular ATP on insulin secretion.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (Potential). Blood cogqulation; G-protein coupled receptor; Glycoprotein; Platelet;
                                 change in platelet shape, and probably to platelet aggregation. SUBCELLULAR LOCATION: Integral membrane protein.
INDUCTION: Repressed by the P2Y1 receptor-specific antagonists A3P5PS, A3P5PS and A2P5P. Tetse inhibit calcium ion mobilization and shape change in platelets.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 4; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S (Potential).

Modelling the P2Y purinoceptor using rhodopsin as template.";

Purg Des. Discov. 13:133-140(1995).

-!- FUNCTION: Receptor for extracellular adenine nucleotides such as AFD and ADP. Seems to mediate its action via a pertussis toxin insensitive G-protein, probably belonging to the Gq family that activate a phosphatidylinositol-calcium second messenger system.

-!- SUBCELLULAR LOCATION: Integral membrane protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Webb T.E., Simon J., Krishek B.J., Bateson A.N., Smart T.G.,

"Cloning of rat and mouse P2Y purinoceptors.";

Biochem. Biophys. Res. Commun. 211:211-218(1995).

-! FUNCTION: Receptor for extracellular adenine nucleotides such as ATP and ADP. In pancreatic islets, may mediate some of the effects of extracellular ATP on insulin secretion.

-! SUBCELULAR LOCATION: Integral membrane protein.

-! TISSUE SPECIFICITY: Expressed in muscle, heart, liver, kidney, lung, brain, spleen, but not in testis.

-! SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Rattus norvegicus (Rat).

The sequence represents a human G-protein coupled receptor (GPCR), hRUP21. The endogenous and non-endogenous, constitutively activated versions of human G-protein coupled receptors (GPCR), are useful for direct identification of candidate compounds as receptor agonists, inverse agonists or partial agonists having applicability as therapeutic agents for treating diseases related to GPCR, e.g. lung cancer. Non-endogenous version of human GPCRs are also utilized in research settings and in vitro and in vivo system, incorporating GPCRs can be utilised to cludidate and understand the roles these receptors play in the human condition, both normal and diseased
                                                                                                                                                        Endogenous and non-endogenous versions of human G-protein coupled receptors for direct identification of candidate compounds as agonists, inverse agonists or partial agonists for use as therapeutic agents.

Human G-protein coupled receptor 2 (GCREC-2) protein.

Human; G-protein coupled receptor 2; cell proliferative disorder; arteriosclerosis; hepatitis; cancer; neurological disorder; epilepsy; Alzheimer's disease; Parkinson's disease; cardiovascular disorder; atherosclerosis; hypertension; myocardial infarction; peptic ulcer; gastrointestinal disorder; dysphagia; anorexia; autoimmune deficiency syndrome; inflammatory disorder; hadison's disease; allergy; Grave's disease; metabolic disorder; AlDS; diabetes; obesity; osteoporosis; gene therapy; GCREC-2. Homo sapiens

Location/Qualifiers Key

```
The invention relates to numen G-protein coupted receptor (GAREC)

polypeptides and polymucleotides. GCREC polypeptides are useful for acreening compounds that modulate their activity. They are useful in the diagnosis, prevention and treatment of disorders which include cell proliferative disorders such as arteriosclerosis, hepatitis.

proliferative disorders such as repress, hepatitis, cataloma, leukaemia, proliferative disorders such as epilepsy, ischaemic cerebrovascular disorders such as epilepsy, ischaemic cerebrovascular disorders such as terriovences, parterial and viral meninglis, Creutzfeldt-Jakob disease, schizophrenic disorders, ammesia; catdiovascular disorders such as arteriovenous fistula, atherosclerosis, hypertension, vascular tumours, myocardial infarction, hypertensive heart cardiovascular disorders such as dysphagia, peptic ocsophagitis, cardiovascular disorders such as dysphagia, peptic ocsophagitis, cardiovascular disorders such as dysphagia, peptic ocsophagitis, constipation, acquired immune deficiency syndrome (AIDS), hepatic constipation, acquired immune deficiency syndrome (AIDS), hepatic constipation, acquired immune deficiency syndrome (AIDS), hepatic compatipation, acquired immune deficiency syndrome (AIDS), hepatic compatipation, acquired immune deficiency syndrome (AIDS), hepatic constipation, acquired intermity in a disease, allergies, spondylitis, amyloidosis, anaemia, asthma, contact constipation, parasitic, protozoal and helminchic infections and trauma; cemphysema, Grave's disease, gout, multiple sclerosis, rheumatoid cuptane; parasitic, protozoal and helminchic infections and trauma; metations such as diabetes mellius, viral, bacterial, cuptane, bunyavirus, bunyavirus, bunyavirus, bunyavirus, bunyavirus, bunyavirus, bunyavirus, bunyavirus, bunyavirus, bunyavirus, bunyavirus, bunyavirus, bunyavirus, bunyavirus, bunyavirus, bunyavirus, bunyavirus, bunyavirus, bunyavirus, bunyavirus, benyavirus, propersis, bunyavirus, benyavirus, propersis, bunyavirus, propersis, propersis, prop

The invention relates to an isolated P2Y-like receptor polypeptide MSB83818-ABB83819) which is also referred to in the specification as HIPHUM 0000037. An effective amount of a substance (agonist or antagonist) which modulates P2Y receptor activity is useful to treat a subject having a disorder that is responsive to P2Y-like receptor acubstance may also be used to manufacture a medicine for the treatment or prophylaxis of a disorder that is responsive to stimulation or modulation of P2Y-like receptor activity. Disorders which may be treated include colon cancers, asthma, COPD, Crohn's disease, irritable bowel syndrome, gastroenteritis and collits, inflammatory bowel syndrome, colicis, rheumatoid arthritis, viral diseases, bacterial infections,

Isolated NOVX polypeptides and nucleic acid molecules useful for treating, preventing, diagnosing and researching pathological conditions in humans with a NOVX-associated disorders, e.g. cancer, stroke or Anderson D; 2002-590673/63. N-PSDB; ABK51678 Vernet CAM, Malyankar U, Taupier RJ,

Claim 1; Page 32; 236pp; English.

Alzheimer's disease.

Cardiomyopathies, atheroselerosis, hypertension, congenital heart defects, scleroderma, endometriosis, haemophilia, dementia, stroke, Parkinson's disease, Huntington's disease, epilepsy, multiple sclerosis, anxiety, pain, leukaemias, hypothyroidism, psoriasis, acne, wounds and asthma. They are also useful for the manufacture of a medicament for treating a syndrome associated with a human disease, specificant associated disorder. They may also be useful in therapeutic applications including protein therapy, as small molecule drug targets, as antibody targets, as diagnostic and/or prognostic markers, in gene therapy, as research tools and in tissue regeneration. The present amino acid sequence represents one of the 17 novel proteins of the invention The present invention relates to a new polypeptide that comprises any of 17 fully defined sequences of 43-990 amino acids given in the specification. The NOVX polypeptide, nucleic acid and antibody of the invention are useful for treating or preventing a pathological condition in humans with a NOVX-associated disorder, e.g. Von Hippel-Lindau syndrome, cirrhosis, transplantation disorders, pancreatitis, obesity, diabetes, autoimmune disease, rean lattery stenosis, interstitial nephritis, glomerulonephritis, polycystic kidney disease, cataract, Alzheimer's disease, acoustic trauma, cancer, infertility,

The present specifically claimed sequence represents a human purinergic-related G-protein coupled receptor (GPCR) encoded by a gene on chromosome 13. GPCRs constitute a major class of proteins responsible for signal transduction within a cell. Upon binding of a ligand to the extracellular portion of a GPCR, a signal is transduced resulting in a biological or physiological change within the cell. The GPCR proteins can be divided into five families, family I contains the purinergic GPCRs (e.g. the P2Y receptors). P2Y receptors are characterised by their selective responsiveness towards ATP and its analogues, some also respond to UTP. The invention comprises a human G-protein coupled receptor protein and

encoding nucleic acids. The GPCR protein and nucleic acids of the invention are useful in the treatment of a disease or condition mediated by a human protease. The GPCR protein of the invention is useful for: the development/identification of therapeutic proteins; assays designed to quantitatively determine levels of the protein in biological fluids; interaction of the GPCR and a molecule with which it normally interacts; and treating a disorder characterised by an absence of, or inappropriate expression of the GPCR protein. The GPCR nucleic acids of the invention are useful in diagnostic assays to identify changes in the GPCR nucleic acid that lead to pathology; controlling GPCR expression; and in gene therapy to treat patients with aberrant GPCR gene expression; and in gene herapy creat patients with aberrant GPCR gene expression. The GPCR nucleic acids can also be used in the production of transgenic animals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240

```
The invention relates to a purified human P2Y1-like G protein-coupled receptor (GPCR) polypeptide and the nucleic acids encoding it (including 5° and 3 sequences, promoters, fragments, variants, or a sequence encoding a protein at least 50% identical to the GPCR). Also included are encoding a protein at least 50% identical to the GPCR, a sequence on expression vector comprising the nucleic acid, a host cell containing the vector and the identification of modulators of the GPCR sepecially the GPCR. The mucleic acid is useful for detecting a polynucleotide encoding the GPCR in a biological sample. The GPCR and nucleic acid are useful for screening for agents which decrease the activity of the GPCR and for modulators of the GPCR. The GPCR and nucleic acid are useful for modulating the activity of P2Y1-like G modulator or agent useful for modulating the activity of P2Y1-like G protein-coupled receptor in a disease such as bacterial, fungal, protein-coupled receptor in a disease such as bacterial, fungal, protein-coupled receptor in a disease, acute heart failure, hyporension, hypertraphy, psychotic and neurological disorders, mycardial infarction, under, inflammation, allergy, multiple sclerosis, disparences and proteins mycardial mericing prostatic hypertrophy, psychotic and neurological disorders, mycardial mericing protein or hypertrophy, psychotic and neurological disorders, mycardial mericing protein mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mericing mycardial mer
                                                                                                                                                                                                                                                                                                                                                               Novel human P2Y1-like G protein-coupled receptor polypeptide which can be regulated for treating infection, pain, cancer, diabetes, anorexia, asthma, hypertension, neurological disorder and dyskinesia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 disorders such as Parkinson's disease, anxiety, schizophrenia, manic depression, delirium, dementia, severe mental retardation, Huntington's disease and Tourette's syndrome. The present sequence represents the P2Y1

The invention relates to an isolated AXOR89 polypeptide (G-protein coupled receptor) and its polymuclectide. The novel AXOR89 polypeptide and polymuclectide encoding the polypeptide, is useful for identifying agonists and antagonists (or inhibitors) that are potentially useful in treating conditions associated with an AXOR89 imbalance, such as bacterial, fungal or protozoan infections, cancers, pain, asthma, Parkinson's Disease, diabetes, obesity, anorexia, bulimia, acute heart failure, hypotension, hypertension, urinary retention, osteoporosis, angina pectoris, myocardial infarction, stroke, ulcers, allergies, benign prostatic hypertrophy, migraine, vomitting, psychotic and neurological disorders, anxiety, schizophrenia, manic depression, delirium, dementia, dystinesias, such as Huntington's Disease or dilles dela Tourette's syndrome. The polymucleotide sequence may also be used for chromosome localisation or tissue expression studies. The AXOR89 is used as a
                                                                                                                                                                 infection; cancer; pain; asthma; parkinson's Disease; diabetes; obesity; anovexia; bulinda; acute heart failure; hypotension; hypertension, ulcer; stroke; urinary retention; osteoporosis; angina pectoris; schizophrenia; myocardial infarction; allergy; benign prostatic hypertrophy; migraine; vonitting; psychotic; neurological disorder; anxiety; manic depression; delirium; Huntington's Disease; Gilles dela Tourette's syndrome;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel AXOR89 polypeptide and polynucleotide encoding it, useful for identifying agonists and antagonists in the treatment of diseases associated with an AXOR89 imbalance, such as cancers, diabetes or asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 KMRPWKSSTIIMLNLACTDLLYLTSLPFLIHYYASGENWIFGDFMCKFIRFSFHFNLYSS 120

                                                                                                                                                                                                                                                                                                                                                 셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a method for screening G protein-coupled receptor (GPCR) genes (ABZ42870-ABZ43216) and/or GPCR proteins (ABP95596-ABP95942) by extracting open-reading frames containing 6-8 transmembrane domains with 250-1000 amino acid residues to give a gene homologous with a known GPCR gene. The receptor proteins and encoded genes are useful for studying in vivo signal transduction mechanism and identifying targets for drug development e.g. based on olfactory and gustatory receptors in form of agonists and antagonists by screening intrinsic and extrinsic ligands as bitter taste inhibitors, taste enhancers and fragrance improvers. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

The invention comprises the amino acid and coding sequence of a human G protein-coupled receptor. The DNA and protein sequences of the invention are useful for developing drugs to prevent or treat (gene therapy): central nervous system diseases, endocrine diseases, metabolic diseases; cancer; respiratory diseases; digestive diseases; immune diseases; infilammations, infections, and circulatory diseases. The present amino acid sequence represents the human G protein-coupled receptor of the

(I) and related mRNA, cDNA, protein, antibodies etc., are used for diagnosis and (gene) therapy of diseases that are (in) directly associated with (I) or its expression products. No diseases are specified but as (I) is expressed only in thyroid tissue, (I) is presumed to be involved in regulation of thyroid function. The present
                                                                                                                                                                               180

                             the polymucleotide encoding it. The protein of the invention has neuroprotective, anti-inflammatory, cytostatic, cardiovascular, antiallergic, hypotensive, antiarteriosclerotic, and osteopathic activity. The GPCR polypeptide is useful for manufacturing a medicament for treating a patient who needs to upregulate a receptor. Preferably, therapeutically useful areas are hypertension, asthma, and artherosclerosis. The sequence represents the G-protein coupled receptor of the invention, PFI-019
                                                                                                                                                                                                                                                                                                                                                        MNEPLDYLANASDFPDYAAAFGNCTDENIPLKMHYLPVIYGIIFLVGFPGNAVVISTYIF 60
                 invention relates to a novel G-protein coupled receptor (GPCR), and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               241 RLTILLLLAFYVCFLPFHILRVIRIESRLLSISCSIENQIHEAYIVSRPLAALNTFGNLL 300
                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human novel polynucleotides and polypeptides. The sequences are useful for the treatment, prevention and diagnosis of disorders such as trauma, viral/parasitic/bacterial infections, Alzheimer's disease, Huntington's disease, Parkinson's disease, behavioural disorders, anxiety, addiction, pain, hair growth diseases, alopecia, pigmentation disorder, inflammatory disorders such as osteonand rheumatoid arthritis, inflammatory bowel disease, Crohn's disease, acquired immunodeficiency syndrome (AIDS), cancers such as colon cancer and ademocarcinoma, askhma, hypertension, autoimmune disease, clabetes, obesity, graft versus host disease, ulcer, bulimia, anorexia and demontia. Sequences ABG70285-ABG70305 represent human novel polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      09

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention provides new G-protein coupled receptor (GPCR) polypeptides designated TGR2, TGR38, TGR18, TGR164, TGR343 and TGR36 and encoding polymucleotides. The polypeptides can be expressed by standard DNA recombination methodology. The polypeptides are useful for screening or identifying modulators of GPCR or signal transduction. The modulators of signal transduction. The modulators of signal transduction. The modulators of objust of transduction are useful for treating or preventing TGR-associated disorders, e.g. asthma, multiple sclerosis or kidney disease. The polypeptides are useful as targets for diagnosing or treating e.g. espliepsy, stroke, neurodegeneration, hypogonadism, hyperprolactinemia, asymptomatic uninary abnormalities, hypertension, nephrolithiasis, clirhosis, lesions, laundice, psoriasis, lupus erythematoeus, or acute inflammatory dermatoses. The present sequence represents a human TGR164
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SACLDLTSSDELNTIKWYNLILTATTFCLPLVIVTLCYTTIIHTLTHGLQTDSCLKQKAR 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel G-protein coupled receptor (GDCR). The receptor, polynuclectide, agonist, reverse agonist and antagonist of the invention may be useful for treating receptor—mediated disorders including viral, fungal or bacterial infections, immune-related disorders such as cancer, pain, diabetes, obesity, anorexia, acute heart failure, hypertension, osteoporosis, angina pectoris, atherosclerosis, stroke, ulcer and allergy, as well as psychotic and neurological disorders such as schizophrenia and dementia, degenerative diseases such as Parkinson's disease and Alzheimer's disease and dyskinesias such as Huntington's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             disease. The current sequence is that of the human purinergic receptor P2Y-related GPCRx10 alternative protein of the invention which is encoded by DNA located on chromosome 13.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New human G-protein coupled receptor, useful for treating receptor-
mediated disorders, e.g. infections, cancer, pain, diabetes, obesity,
acute heart failure, osteoporosis, stroke, ulcer, allergy, or
                                                                                                                                                                                                                                          Human purinergic receptor P2Y-related GPCRx10 alternative protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Detheux M;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Parmentier M,
